

## **Major Accomplishments of the Toxic and Chemical Substances Bureau, Environmental Protection Administration, Executive Yuan in February 2021**

1. On February 3, the Director General chaired the 2nd Advisory Committee Meeting in 2021 of the National Chemical Substance Management Board. The Board's experts, scholars, representatives of civil groups and 15 related agencies (units) were invited to the meeting to report and consult with participants for their opinions on four topics: "Board's operation mechanism," "importance and implementation of related international conventions," "establishment and flow management of chemical cloud information system," and "toxic and chemical disaster response system."
2. On February 7, the EPA conducted a policy campaign for Lunar New Year to ensure the safe use of environmental sanitation agents for disinfection and sterilization, and to promote the correct use of legal environmental sanitation agents in accordance with a product's labeling (product's outer packaging). It promoted the "4 Dos" for safe use of environmental agents, providing channels for inquiries about legal environmental agents and the government's public information, and calling for good environmental maintenance to reduce use of environmental agents.
3. During the 2021 Spring Festival holiday, the toxic and chemical disaster system completed the organization and preparation operations of the TCSB and the consultation and technical teams. During the period, 10 environmental incidents were monitored with no toxic and chemical substance disaster incidents.
